

Proactive **Student Success** Through **Predictive Analytics** and Early Intervention.

● The Challenge

- **Delayed Response:** Institutions only realize a student is at risk after they have already failed or stopped attending, making intervention ineffective.
- **Fragmented Data:** Student information (grades, attendance, behavioral patterns) is siloed across different systems, preventing a holistic view of the student journey.
- **Economic & Social Impact:** High dropout rates lead to significant financial loss for the institution and negatively impact the long-term career prospects of students.

● The Solution

RiskRadar is an advanced AI predictive engine that **identifies students at risk** of dropping out or failing long before it happens.

By analyzing historical and real-time data from multiple sources, it **classifies risk levels** and provides faculty and mentors with actionable insights and **automated alerts** to trigger personalized support workflows.

● Key Features

Integrated Risk Intelligence Command Center

Advanced AI scoring engine that categorize students into risk levels (Low, Medium, High), providing Course Directors with granular student views and Institutional Leadership with aggregated strategic reports.

Proactive Alert System

Automated notifications that alert mentors and pedagogical support teams the moment a student's risk profile changes.

Intervention Tracking

Enables the monitoring of support actions taken, allowing the institution to measure the effectiveness of different intervention strategies.

● Business Value

Retention

Reduction in Attrition Rates

Early identification allows for timely intervention, significantly decreasing dropout rates and increasing institutional revenue stability.

Productivity

Optimized Resource Allocation

Directs student support services and mentorship programs to the students who need them most, maximizing the impact of human resources.

Reputation

Institutional Reputation

Improves graduation rates and student satisfaction, enhancing the institution's ranking and appeal to future applicants.
